## **CLAIMS**

1. A process for obtaining a polythiourethane polarized article comprising: positioning a polarized polyvinyl alcohol film in a molding cavity of a two part mold assembly; pouring in the molding cavity a polymerizable composition comprising:

- (a) at least one poly(iso)thiocyanate monomer and at least one polythiol; or
- (b) a mixture of at least one liquid NCO- or NCS-terminated poly(thio)urethane prepolymer and at least one liquid SH-terminated poly(thio)urethane prepolymer; curing the polymerizable composition; and removing the polythiourethane polarized article from the molding cavity.
- 2. The process of claim 1, where the polymerizable composition is free of NH<sub>2</sub> functionalities.
  - 3. The process of claim 1, where the two part mold assembly comprises two mold parts spaced apart by a peripheral gasket, where the gasket includes means for positioning and maintaining the polarized polyvinyl alcohol film in a predetermined position.
- 4. The process of claim 3, where the means comprises an annular recess in which the periphery of the polyvinyl alcohol film is inserted.
  - 5. The process of claim 1, where the polarized polyvinyl alcohol film is a single layer of polyvinyl alcohol.
  - 6. The process of claim 1, where the polarized polyvinyl alcohol film has been dried at a temperature ranging from 25°C to 100°C before pouring the polymerizable composition in the molding cavity.
  - 7. The process of claim 6, where the polarized polyvinyl alcohol film has been dried at a temperature ranging from 45°C to 60°C before pouring the polymerizable composition in the molding cavity.
  - 8. The process of claim 1 wherein the polymerizable composition is cured from 10°C to 120°C.

- 9. A process for obtaining a polarized article comprising: positioning a polarized polyvinyl alcohol film in a molding cavity of a two part mold assembly; pouring in the molding cavity a polymerizable composition comprising:
  - (a) at least one poly(iso)thiocyanate monomer and at least one polythiol; or
  - (b) a mixture of at least one liquid NCO- or NCS-terminated poly(thio)urethane prepolymer and at least one liquid SH-terminated poly(thio)urethane prepolymer; and curing the polymerizable composition to yield the polarized article, where the polarized polyvinyl alcohol film adheres to the cured polymerizable composition.
- 10. The process of claim 9, where the polymerizable composition is free of NH<sub>2</sub> functionalities.
- 11. The process of claim 9, where the two part mold assembly comprises two mold parts spaced apart by a peripheral gasket.
- 12. The process of claim 11, where the peripheral gasket includes an annular recess in which the periphery of the polyvinyl alcohol film is inserted.
- 13. The process of claim 9, where the polarized polyvinyl alcohol film is a single layer of polyvinyl alcohol.
- 14. The process of claim 9, where the polarized polyvinyl alcohol film has been dried at a temperature ranging from 25°C to 100°C before pouring the polymerizable composition in the molding cavity.
- 15. The process of claim 14, where the polarized polyvinyl alcohol film has been dried at a temperature ranging from 45°C to 60°C before pouring the polymerizable composition in the molding cavity.
- 16. The process of claim 9, where the polymerizable composition is cured from 10°C to 120°C.
- 17. An article comprising polythiourethane and a naked polyvinyl alcohol film directly adhering to said polythiourethane.
- 18. The article of claim 17, where the naked polyvinyl alcohol film is embedded between two layers of polythiourethane.
  - 19. The article of claim 17, further defined as an optical lens.
